

The AirRevival wall unit is designed for larger rooms or environments with a higher load like pre-schools or offices. The AirRevival wall units are easy to use and very effective in taking away pollutants but still very energy efficient. The units are designed to be mounted on a wall to save precious floor space.

A simple, efficient and unique solution to a big problem!

AirRevival N7 200 air purifier uses electrons to create a harmless electrostatic field which directs the airborne particles to the wall surface. The system is extremely energy efficient (10.6 kW a year of constant use). The AirRevival units operate in complete silence so can be used all day without disturbing ongoing activities in the room. The larger wall-hung system is designed to purify the air in a room up to about 50 m². The AirRevival system is completely maintenance free and therefore very cost effective. Particles collected on the wall do not affect the overall efficiency but can be cleaned off for a nicer atmosphere if needed. The system is wall mounted to avoid usage of precious floor space and is kept out of reach from children.

Specification:

Size (Length): 2 m, possible to shorten during installation

Weight: 1.2 kg including the power adapter

Energy consumption: 1.2 Watt, powered via a grounded 12 V AC/DC converter. Only 10.6 kW per year when always on.

Ozone emission: 0 ppm

Sound level: quiet

Recommended room size: up to 50 m²

Certifications: EMC, CE

Country of manufacture: Sweden

Harmonize code: 8421.3910

Other: AirRevival must be connected to a grounded outlet. As with all electrical devices, an electrical discharge may be released if the power is left on while assembling the system. Such discharges may cause mild discomfort but are normal and not in any way dangerous. Always complete assembly before turning the power on, and always turn off the power before adjusting anything, moving the system or cleaning the wall. AirRevival N7 200 is very easily installed on the wall using four stainless screws.
